All online support & questions are answered within a 24 hour period. I think this is good for the environment, but I don't want it to be paid for out of my own pocket. How do I go about donating in anyway, but also not donate out of my own pocket? A: To answer your question, the first thing that comes to mind is; use PayPal to donate through their eco-challenge fundraising system. Paypal donates 10% of every transaction they process to environmental charities. PayPal's goal is to support organizations and projects that make a real difference for people and the environment. For every transaction they process, PayPal donates up to 10% of the transaction to environmentally focused charities. In addition, PayPal will match the first \$100,000 of every charitable donation you make with PayPal. (Source: However, you will need to have an account set up with PayPal. If you do not have one, you can sign up for an account and be able to donate in the following manner; PayPal can be added to your Account Settings. Select your Account from the Menu and go to Settings on the right. A PayPal menu will appear, where you can enable PayPal. The PayPal item will be added to your Account Settings. Alternatively, you can send a PayPal donation directly from your bank account. 1. Field of the Invention The present invention relates to a display device and a method of driving the same and, more particularly, to a technology of driving a dot inversion system. 2. Description of the Related Art In recent years, an organic electroluminescence display device (hereinafter, referred to as an organic EL display device) in which an organic material is used as a material of a light emitting element attracts attention as a next generation display device for a mobile phone, a TV, etc. since it has characteristics such as high-luminance light emission with low power consumption and a thin and lightweight configuration. In an organic EL display device, when a voltage is applied to the organic EL element, electric charges (positive holes and electrons) are injected from an anode and a cathode, and recombined to generate excitons in an emission layer. Light is emitted by the generated excitons when the generated excitons are transitioned from a singlet state to a triplet state 82157476af
